

Why Zyvault?

Why Zyvault? Globally trusted software

Zyvault's backup software is deployed around the world in companies ranging from one man band to multinationals. Good to know when you are looking for a backup provider which may save your company from disaster some day. Always there

Providing high availability, failsafe online backup is a complex technological challenge and requires considerable investment in people and technology. Such a high level of commitment is beyond the scope or budget of most online backup companies. Service not price

If you take your business seriously then, like us, you take backup seriously. In a market in which a plethora of price driven providers has emerged, we remain committed to investing in the mission critical reliability and quality of service required when managing companies' precious data. Security

Our software, storage servers and datacentres were designed from the ground up with security in mind. Our encryption technology ensures that your data is visible only to you and our datacentres are inaccessible without rigorous security screening. Being a former nuclear bunker, one of our datacentres is even toughened against the most extreme eventualities! Accessible

With Zyvault, your data is accessible 24 x 7 from any Internet connected computer so whether you have a disaster or just forgot to take a vital file with you to a meeting, you will always be able to retrieve it in seconds. Automation

Once installed and you have selected files and folders for protection, the rest happens automatically, every day or even every hour. No need to change disks, rotate tapes or label CDs. Zyvault's automation takes the hassle out of backing up your data and the hassle is what causes many companies to skip their daily or weekly backups. Scalable

The Zyvault storage platform provides unlimited storage space so you can be sure that as your business and data protection needs grow, Zyvault's storage platform will scale up with you. Zyvault Online Backup: safe - secure - always there
