

How it Works

How it Works Simplicity itself

Some backup software is designed for technicians. Zyvault online backup however is simplicity itself and uses the familiar Windows Explorer file manager layout. Our software installs in 5 minutes. Once installed you select any files, folders or data you want to keep protected and enter your secure user information. That's it! Every day from that point forward your data is protected; automatically, securely and with no further effort. With such simplicity, you may imagine that security has been sacrificed but Zyvault Online Backup provides industry leading security and encryption. This is why Zyvault Online Backup software is trusted by companies large and small, worldwide.

Key features

- Download and install software
 - Select files for backup
 - Enter unique security details
 - Your data is compressed and encrypted
 - Data is sent over an encrypted connection to our primary datacentre- Data is replicated at our secondary datacentre, a former NATO nuclear bunker
