Zyvault Online Backup

Secure, Automated, Scalable, Flexible

Zyvault Online Backup is a secure, totally automated, backup and recovery solution, uniquely designed for network efficiency, centralised management, policy-based control and simplicity of use and targeted at computer users and systems that operate both inside and outside the confines of corporate IT networks.

Ban the tape!

No more tapes to purchase, change, transport, catalogue, and store. By eliminating the costs and data loss risks inherent in manual backup procedures, IT personnel can now focus on more strategic business initiatives.

Business is Mobile

The volume of data held outside the enterprise on laptops, notebooks, PDAs, is spiralling. With this comes higher risk of data loss and ensuing productivity loss for the user and helpdesk staff. Users have immediate access to all their stored data from any web connected machine either via Zyvault software or using any web browser over an SSL connection.

RoBo Cop

Remote or Branch offices are a headache for the most diligent IT manager. Zyvault Online Backup installs and protects from day one without time consuming central policing.

Bandwidth Friendly

Remote workers may not enjoy the same network capacity as when in the office. Zyvault software uses patented compression and incremental patching to reduce network overhead by up to 98%.

More Information

For more in depth information please call for a chat about your requirements or review further links below.

Key Benefits

- Fully automated, so your staff need never remember to backup their data.
- Intelligent file selection automatically protects important files.
- Reduces bandwidth utilisation by up to 98%.

- Built in version control, allowing documents to be restored in their saved state.
 - Instant file recovery and availability of data.
 - Remote search for lost files months after they were deleted.
 - Complete confidentiality; data transmitted and resides in industry leading encrypted format.
 - Network activity monitor allows remote users to back up automatically on connection.
 - File exclusion at administrator level to effectively enforce your corporate backup policies.
 - Securely access files remotely using Zymove from any Internet browser.
 - Scales seamlessly from 1 to 100 000 users.
 - Supports Microsoft Volume Shadow Copy Services (VSS) and Outlook PST files.
 - Supports Microsoft 2000, XP and Vista, as well as Mac OS X (from Panther/10.3)
 - Users can self install, setup, backup, and restore, thus reducing helpdesk overhead
 - Single mailbox recovery
 - File inclusion and exclusion at administrator level to enforce company policy
 - Control of users, groups, licenses, and storage from a single management console
 - Remote connection to distributed servers: modify configure and initiate backups and restores.
 - Remote servers can securely be incorporated into the company backup policies and procedures
- Zyvault Online Backup: safe - secure - always there
