

Introduction

Why Online backup?

You realise the value of your data, and thus the importance of protecting that data. You may have already suffered data loss or probably know of an individual or company that has and the chaos it caused. Losing your accounts, customer contact details, emails and other vital business data - in essence the backbone of any company - can be catastrophic.

Traditional vulnerability

Traditional methods of backup including tapes, CDs and DVDs, ZIP drives and floppies have significant disadvantages due to degradation of the media and its vulnerability to damage or loss.

The people factor

How many times have you forgotten to do the backup or waived it off until the next day because you are in a hurry or don't want the hassle that day. How many times have your employees done the same? No backups means no data when you need it. Zyvault's software automatically backs up your data every day without you or an employee having to do anything.

Offsite

If you experience a fire, theft, flood or other disaster your backups are probably as worthless as your computer if they had been stored on top of or next to it. With Zyvault Online Backup, your data is always stored safely in not one but two, state of the art secure data centres, located miles apart from each other.

Cost

The cost of buying multiple sets of tapes/CDs/discs to overcome their vulnerability to damage and data loss pales by comparison to the cost of your or your employee's time in monitoring and managing the backups. You can do the math - if it takes you or your employee an hour a week, how much did that cost you every month? Zyvault Online Backup's set and forget software frees you from these costs.

Benefits of Online Backup

The essential checklist for your backup strategy and inherent in Zyvault's Online Backup service is:

-

ALWAYS off site

-

zero failure rate

-

fully automated - set and forget

-
